2. Course Intended Learning outcomes

On successful completion of this course, students are expected to be able to:
1. Exercise independent judgment to critically review the literature relating to a specific project.
2. Design and plan an experimental approach to test a specific hypothesis, to carry out research and to organize research tasks to meet a deadline.
3. Implement the planned experimental procedures under the guidance of senior laboratory personnel.
4. Communicate in a clear and organized manner an evaluation of a project, scientific interpretation of the data and conclusions reached.
5. Apply experience and technical ability to undertake future research on unfamiliar topics.

3. Meeting Time and Venue

Laboratory:
Date/Time: TBA
Venue: TBA

4. Course Description

Credit points: 2
Pre-requisite: LIFS 2040 and LIFS 2240
Exclusion: NIL
Grading: P or F
Brief information/synopsis:

The objective of the course is to increase awareness of preparation in research and learn how to synthesize a research proposal. Together with the supervisor each student will identify a research question, do a literature review, familiarize themselves theoretically with technical aspects of the project and write a short proposal. Approval of a faculty supervisor is required for students to enroll in the course. Graded P or F.
