FAQ

1. What is the difference between the BIBU Program and the existing dual degree program of BSc in Biotechnology and BBA in General Business Management?

   The 4-year BIBU Program has different objectives from the 5-year dual degree program. The dual degree program equips students with in-depth knowledge in both disciplines, whereas the interdisciplinary BIBU Program aims to equip students with the essential knowledge in biotechnology, complemented with business know-how and skills to effectively understand, manage, and market biotechnology initiatives.

2. How is the BIBU Program different from studying a Biotechnology degree with a minor in Business?

   Students with a major in biotechnology and a minor in business will receive broad-based science training followed by in-depth theoretical training in biotechnology and bioproduct applications. The minor in business offers students a basic understanding of business but does not provide sufficient training for them to take on biotechnology management or entrepreneurial roles. The BIBU curriculum is designed to include approximately equal credits in biotechnology and business complemented with interdisciplinary courses.

3. What is the advantage of applying for direct entry to the BIBU Program?

   Students taking BIBU as their first major are exempted from the SSCI/SBM core course requirements. The curriculum is tailor-made to include only select courses from both Schools, which allows students with dual interests to follow a coordinated and integrated curriculum so that they can adapt to their study earlier to pursue their interest or meet their career goals.

The Bachelor of Science in Biotechnology and Business (BIBU) Program is suited to high school graduates with a hybrid interest in both biotechnology and business. Ideal candidates will be students who are technically competent and interested in biotechnology applications, and who are eager to develop a managerial or leadership career in the biotechnology- or life science-related industries.

The Program aims to admit 60 students per year (30 through direct entry via JUPAS/Non-JUPAS admission schemes, and 30 through SSCI/SBM major selection exercise at the end of year 1 study).

PROGRAM INTRODUCTION

Biotechnology is the application of techniques and processes that utilize biological systems to provide innovative solutions to many complex issues in agriculture, medicine, food, energy and environment. As we enter the 21st Century, critical advancements in the field, together with the continued academic excellence in biosciences and scientific human resources, collectively point to a continued outgrowth of biotechnology industry.

Mainland China is one of the top five emerging biotechnology leaders in Asia Pacific. In light of these booming development, both government and private sectors give much impetus to further move this emerging industry forward quickly. With enormous potential of biotechnology for the future, there is an increasing demand in both Hong Kong and mainland China for candidates who can serve the industry at the levels of research and development, technical support, and management. Current biotechnology employees are mostly trained in either science or management; talents who possess both technical knowledge and a business mind are scarce in the region.

In view of this, the School of Science (SSCI) and the School of Business and Management (SBM) of HKUST have jointly developed a new BSc program in Biotechnology and Business (BIBU) to meet the regional demand for professionals. The interdisciplinary curriculum will equip students with a solid foundation of knowledge and skills to function effectively in the industry, enhance students’ creativity and critical thinking skills, and provide them with a global outlook on biotechnology development and applications. The goal is to nurture students to become effective managers and leaders in the biotechnology industry in Hong Kong and Greater China.

PROGRAM STRUCTURE

The holistic BIBU curriculum spans multiple disciplines including various domains of life science and biotechnology, as well as foundational business subjects including managerial accounting, micro/macroeconomics, and operations management.

This is a 4-year program with a total of 123-129 credits, including:
- University Common Core: 36 credits
- English Communication: 6 credits
- Mathematics: 3-4 credits
- Business: 29 credits
- Science/Life Science: 30-35 credits
- Interdisciplinary Courses: 10 credits
- Biotechnology and Business Electives: 9 credits#

# Students may reuse a maximum of 9 credits of those courses to count towards both Major and University Common Core requirements.

PROGRAM HIGHLIGHTS

- A unique undergraduate program specifically designed for graduates of biotechnology-related industries in the global and particularly the Greater China market.
- Broad-based learning experience that cuts across biotechnology, life science applications and business management, providing students with a solid foundation to serve lead in the biotech industry.
- Internship opportunities for students to gain practical industry experience, which helps to increase chances of employment post-graduation.
- No. 1 in Hong Kong and Top 2 in Asia in five business-related disciplines (QS World University Rankings 2015); and No. 15 in Life Sciences and Medicine (QS Asian University Rankings 2015).

CAREER PROSPECTS

- The holistic BIBU experience prepares students to excel in any career path they aspire to. A wide variety of career opportunities are available in both public and private sectors in Hong Kong and Greater China.
- Potential employers include multinational pharmaceutical companies, vendors of biotechnology products/services, consulting firms focusing on the biotechnology and pharmaceutical industries, and many more.

ADMISSION REQUIREMENTS

Students may apply for the BIBU program through direct choice in JUPAS/Non-JUPAS admission scheme, or transfer from the regular Science program (JS5100) or any SBM programs after their first year of study. Admission is based on academic results and interviews.
